## Dedicated Internet Leased Line

***Leased Lines Dedicated  
Super-fast Connectivity***

### Guaranteed Speed Leased Line Internet Delivered Wirelessly

Leased Lines are business grade broadband circuits that provide guaranteed, dedicated and symmetrical bandwidth. Perfectly suited for organisations that depend on 100% connectivity, leased lines don't suffer from contended (shared) bandwidth or the unreliable delivery associated with broadband services. If your organisation can't afford to trust broadband suppliers that are forced to rely on third party owned, decaying copper cables then a wireless leased line is the only solution that guarantees that the Internet connection speed you pay for, is the speed you get.

#### Features

- Symmetrical upload and download speed
- A dedicated (unshared) business circuit
- Guaranteed bandwidth up to 40Mbps
- 24/7 network monitoring and support

#### Benefits

- 100% independence from Wired exchanges & Cabling
- 98.99% uptime and 5 hour fixed guarantee
- 5-6 day delivery period subject to feasibility
- Unrivalled scalability & flexibility

### Wireless fibre-optic leased lines

Our wireless leased lines provide all the benefits of a dedicated circuit without the costly installation of a fibre connection. Traditionally, private fibre circuits cost thousands of pounds to install depending on the distance from the nearest exchange. Airway Broadband leased lines are subject to a small fixed fee installation cost.

### Scalable, Flexible

With our innovative use of technology AIRWAY BROADBAND customers can upgrade to a higher bandwidth or limit internet speeds to reduce costs remotely at a moments notice and usually without charging the customer an upgrade

### Low cost, No contract

Airway Broadband wireless leased lines offer our customers Internet access with capacities from 2Mbps upwards. Unlike all other providers who require a 3 or 5 year contract, Airway Broadband leased lines are available on a 'pay as you go' basis allowing you to stop the service anytime you like. Our complete independence from third party providers enables us to deliver dedicated private broadband Internet circuits within 5-10 days, without the need for costly installation fees.

### Immediate installation

Compared to fibre providers who have a lead time of between 60 and 90 days, Airway Broadband can deliver leased lines within 5 to 10 days. Fibre operators are dependent on Wired cables for installation of the circuit, which can require costly construction work. Airway Broadband wireless installations are completely independent of existing cables and cabinets.

### Secure, Resilient

Airway Broadband wireless IP connections are encrypted and firewall protected for maximum security. Airway Broadband's investment in its core infrastructure makes it one of the most powerful, flexible and resilient broadband networks in the

# Fixed Wireless

## Dedicated Internet Leased Line

### Does your organisation need dedicated, guaranteed speed broadband access?

Most broadband Internet access is shared with many other users so connection speeds vary depending on the number of people using it at any one time. Internet delivered by cable slows down as the distance from the exchange increases. The result is a fragile, unreliable service.

Most businesses today rely heavily on their Internet access and it has become a crucial part of their operations and success. In many cases businesses want a fixed monthly cost and guaranteed, uncontended bandwidth that ensures they have the speeds they need to maximise their productivity.

Wireless leased line internet is designed for organisations that depend on having a fully functional guaranteed speed broadband connection. If your business can't afford to share bandwidth with Internet suppliers that are forced to rely on third party owned, decaying copper cables then a wireless leased line from Airway Broadband Wireless is the solution.

A range of speeds and a flexible upgrade path means that your organization can benefit from guaranteed and fully managed bandwidth availability when you need it. Wireless leased lines with guaranteed speeds from 2Mbps to 40Mbps can be operational in less than 10 days and prices start from per Mb per monthly basis.

### Affordable

At a fraction of the price offered by Wired and other Internet service providers Airway Broadband wireless leased lines provide a fast, cost effective and highly flexible alternative to hard wired, cable supplied internet. Higher speeds and customised services are available on request. Customers who are not ready to commit to a dedicated leased line can start with a Airway Broadband basic service and upgrade at a moments notice without penalty.

- Unlimited data transfer
- Ultra fast upload speeds
- Free IP address
- Instant speed upgrades

### Extendable

Once your organisation has a dedicated Internet connection Airway Broadband Wireless can help you to extend it with a private wireless network link to other sites or buildings. We can also provide professional indoor and outdoor WiFi hotspots to maximize the coverage of your network providing a seamless connection throughout your entire workspace.
